

WHAT IS NICOTINE?

Nicotine occurs naturally in tobacco. It has pharmacological effects, including increasing heart rate and blood pressure.

Nicotine is addictive and not risk-free. Nicotine is not the primary cause of smoking-related disease. Other chemicals in the smoke are.

Certain people should not use products that contain nicotine. This includes pregnant or breast feeding women and people with heart disease, severe high blood pressure, or diabetes. Minors should not use or have access to tobacco or nicotine-containing products.
